

**INTERNATIONAL  
COTTON  
CONFERENCE  
BREMEN**

**2024**

**20 - 22 MARCH 2024 | BREMEN PARLIAMENT HOUSE**

## **PRESENTATION**

**Session:  
Ginning News**

**Title:  
Cotton Moisturization in Ginning for Staple Length Preservation**

**Speaker:  
Justin Kühn , Institut für Textiltechnik (ITA), RWTH Aachen University (Germany)**

**Conference Organisation**  
Faserinstitut Bremen e.V., Bremen, Germany. E-Mail: [conference@faserinstitut.de](mailto:conference@faserinstitut.de)  
Bremer Baumwollboerse, Bremen, Germany. E-Mail: [info@baumwollboerse.de](mailto:info@baumwollboerse.de)

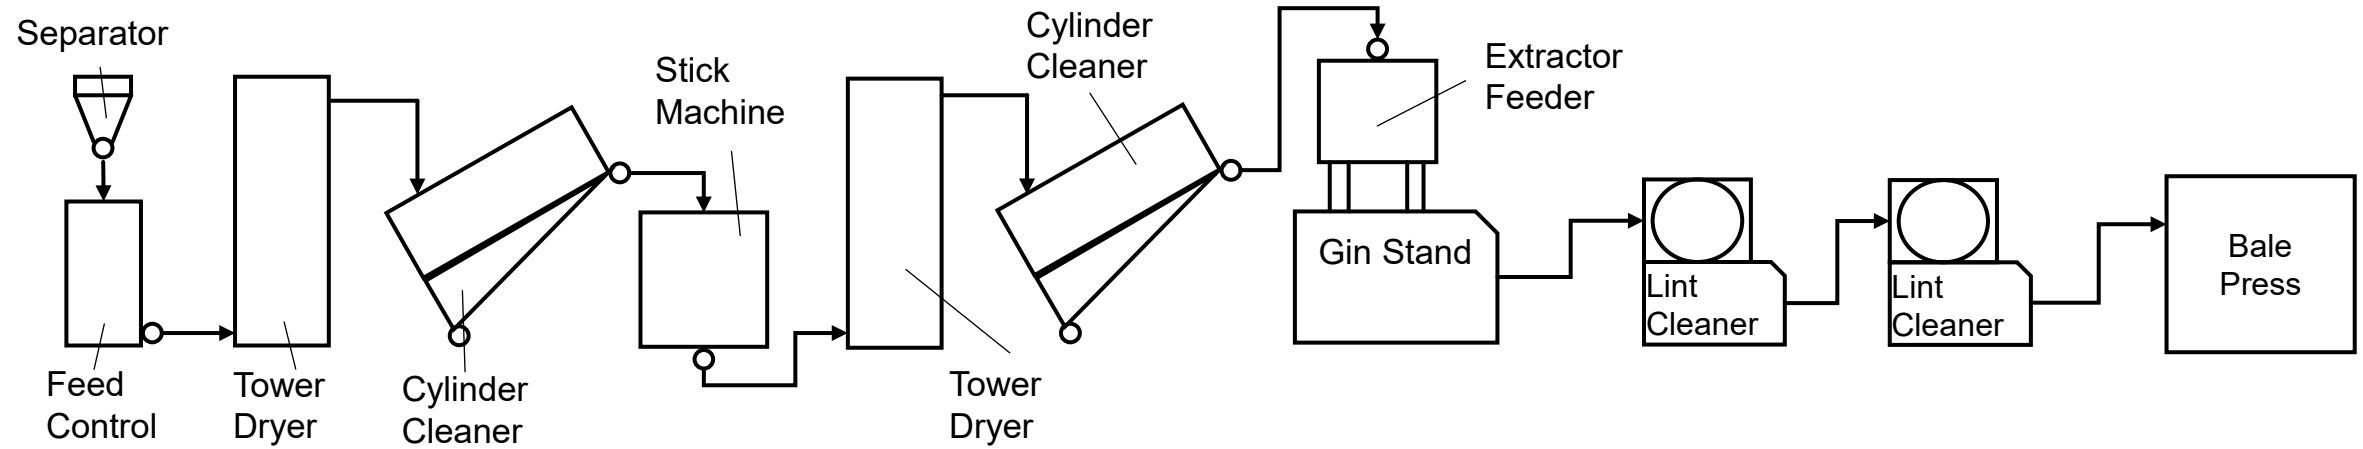

# Cotton Moisturization in Ginning for Staple Length Preservation

By Justin Kühn – Head of Staple Fibre Technologies

# Ginning Basics

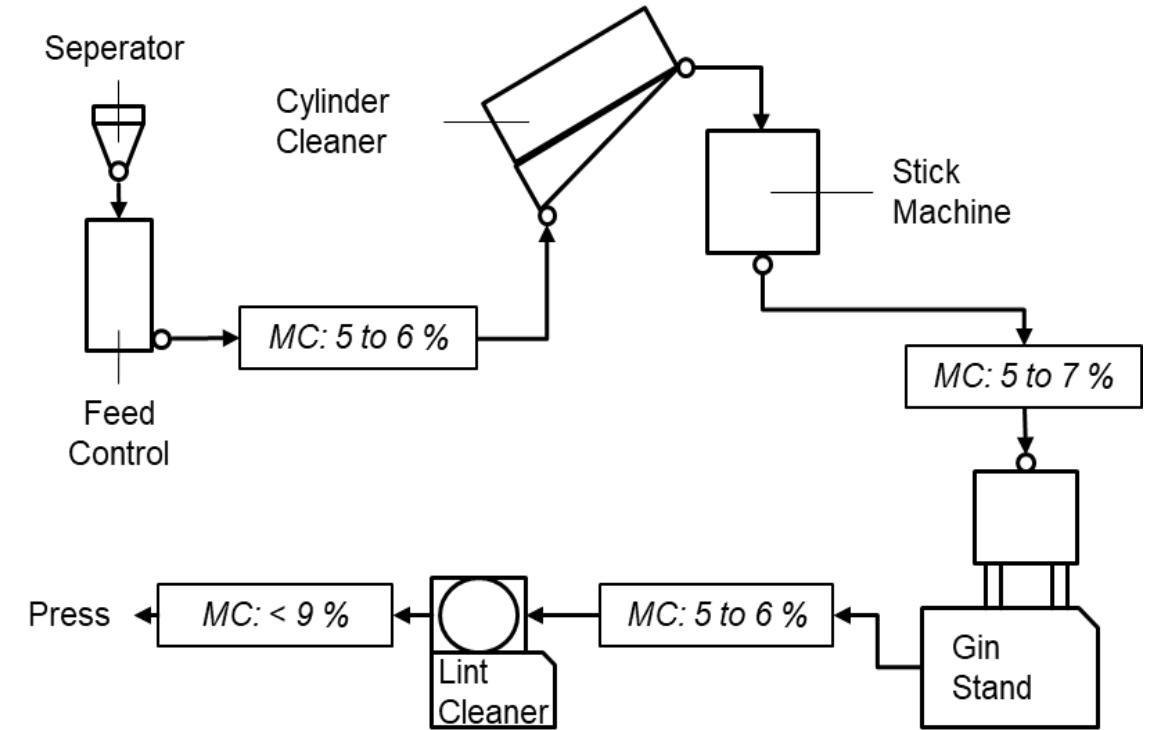

## Ginning Facilities

# Ginning Potentials

## Moisture Management

- Different machines need different moisture contents (MC)
- Several different conditions in the facilities
- Differences in the varieties
- **Finding a solution to raise the moisture quickly**
- Solutions for measurement on-line
  - Infrared
  - Microwave
  - Capacitive

# Ginning Potentials

---

## Possible Ginning Quality

	Hand ginned	Roller ginned
Average length [mm]	27,3	24,3
Trash count [cnt/g]	10	38
Neps [cnt/g]	137	330

- Maximum ginning quality not yet reached
- Hand ginning produces better qualities than roller ginning
- Possible to find a better trade off between length, trash content and speed

## Findings – Moisture Management

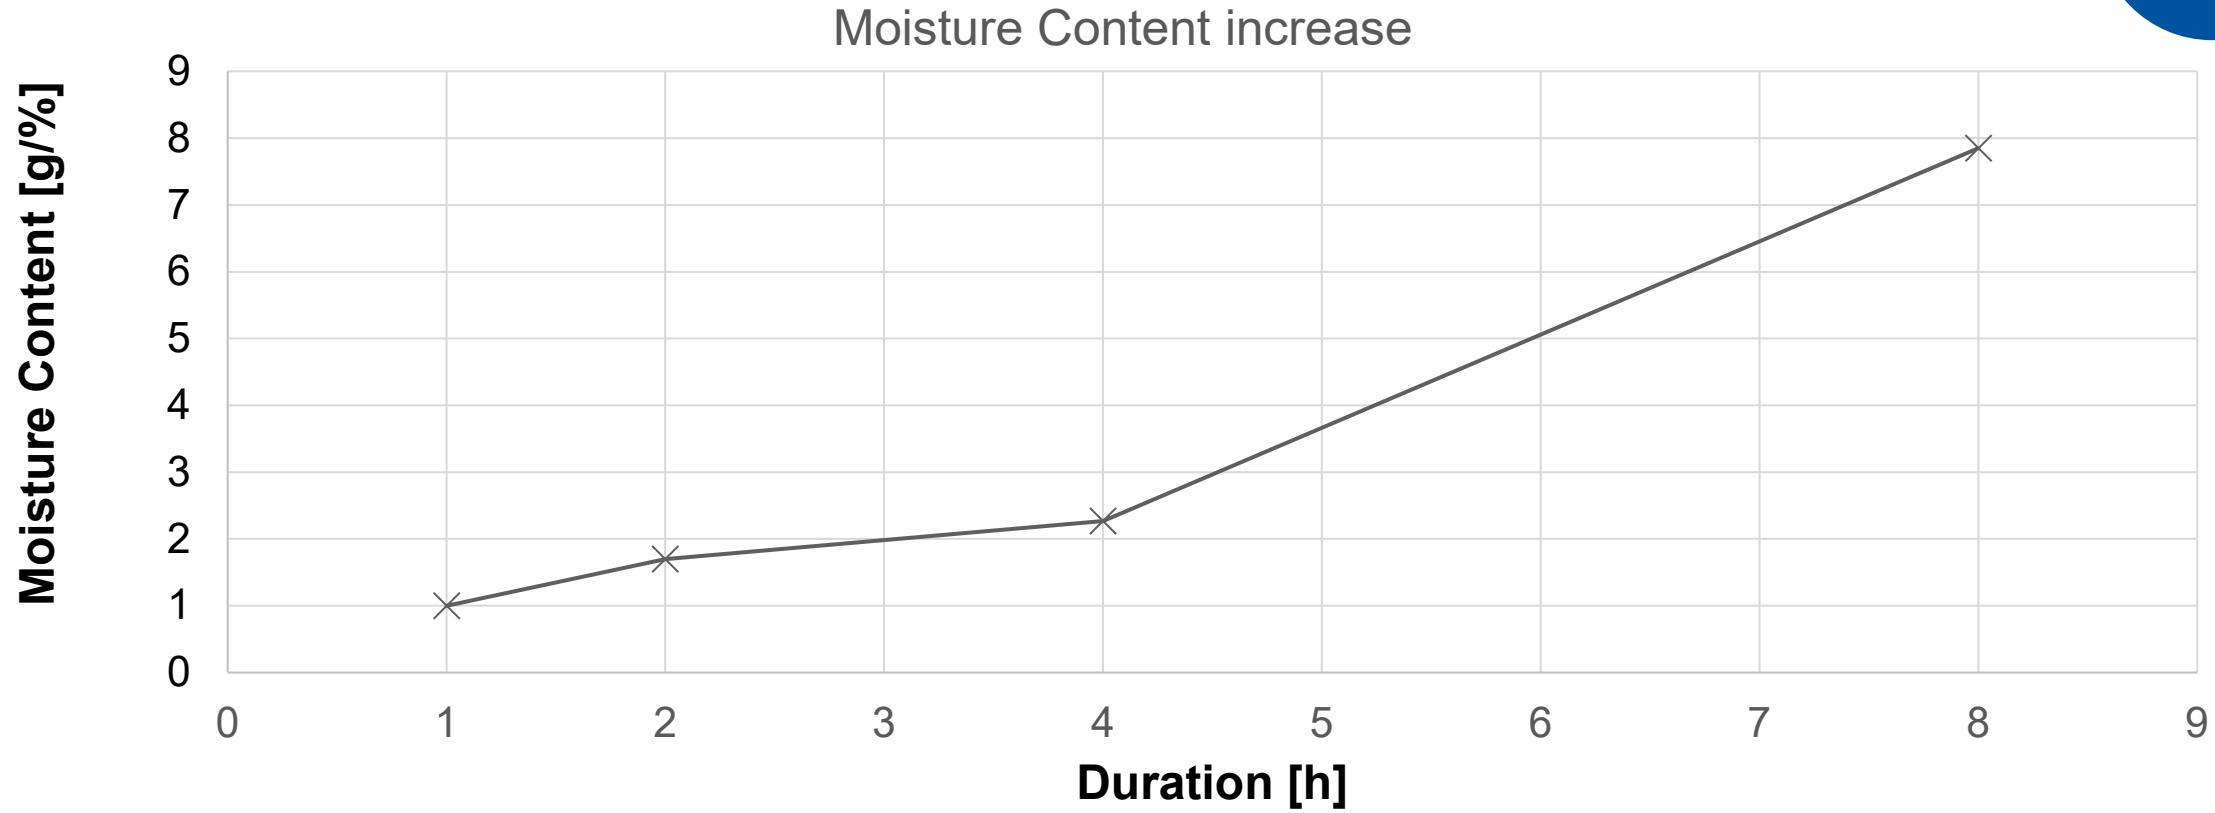

### Prototype development

- Development of two different processes
  - Based on existing techniques
  - Simple Prototyping
- Air Humidification:
  - Using a Air Humidification device in a covered box
- Water Spray
  - Fine water spray during cotton conveying

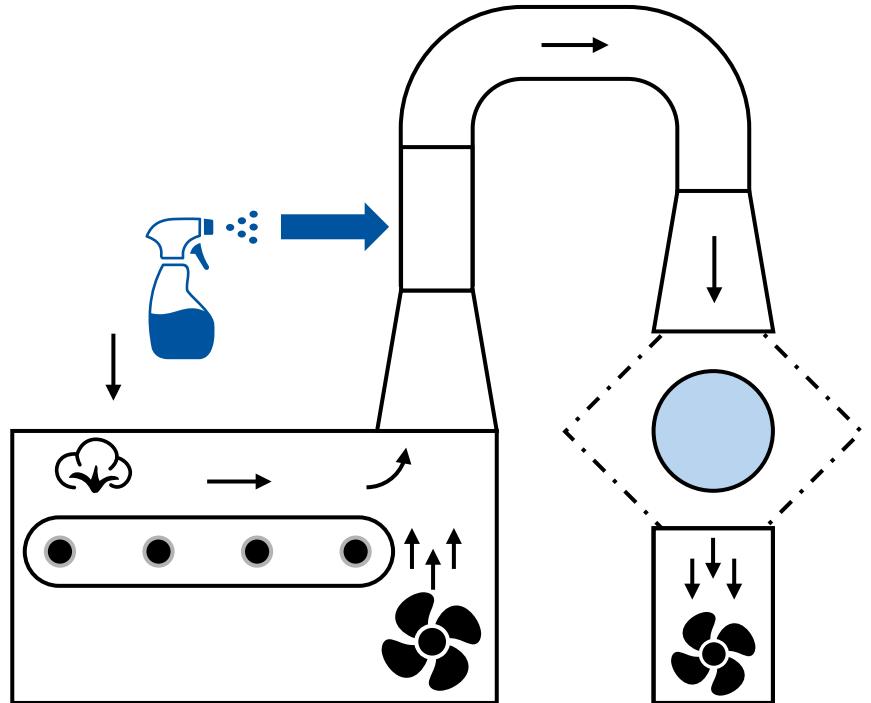

## Findings – Moisture Management

### Prototype testing – Air Humidification

## Findings – Moisture Management

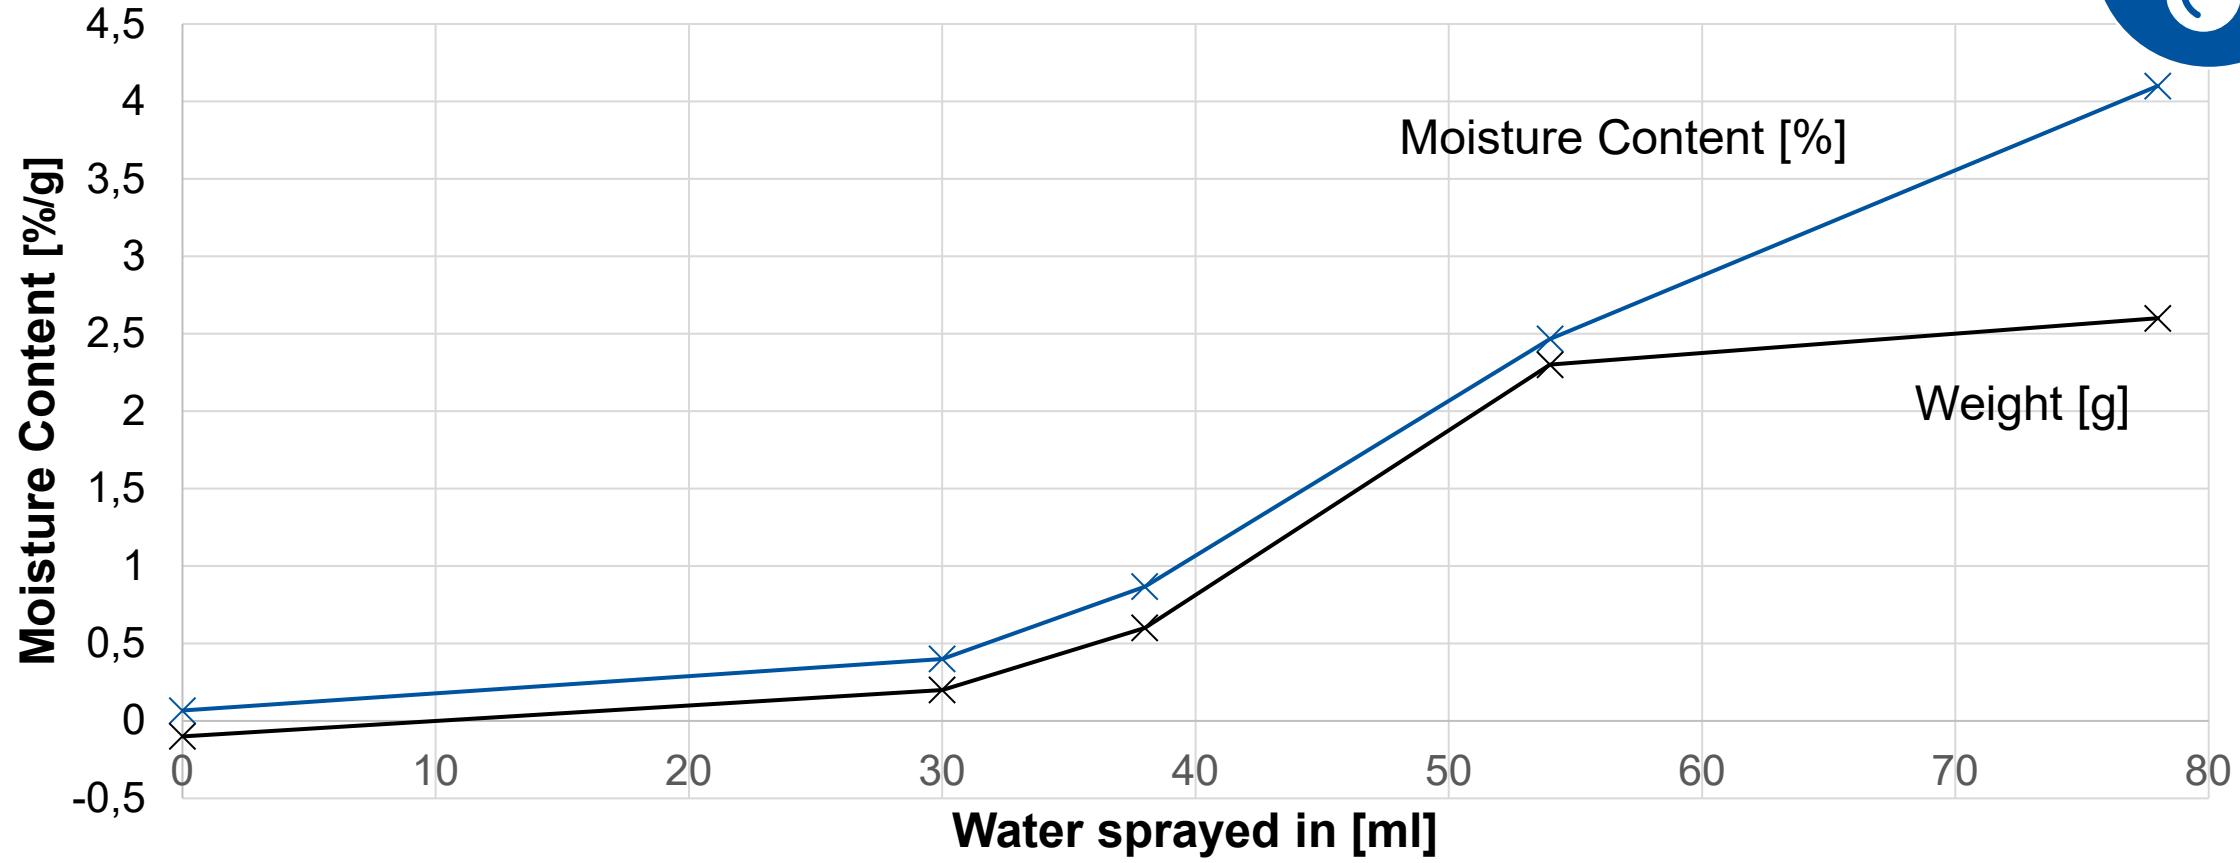

### Prototype development – Water Spray

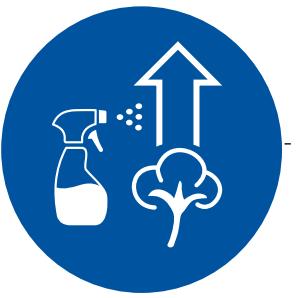

Fine opener

## Findings – Moisture Management

### Prototype development – Water Spray

## Cotton ginning by hand

### Wet cleaning

### Wet ginning result

# Findings – Moisture Management

---

## Prototype evaluation

### Moisturized Air

- Insufficient process duration
- Very good MC-increase
- Wettening unlikely
- MC-distribution very good
- No mechanical effectance
- Expensive installation and operation

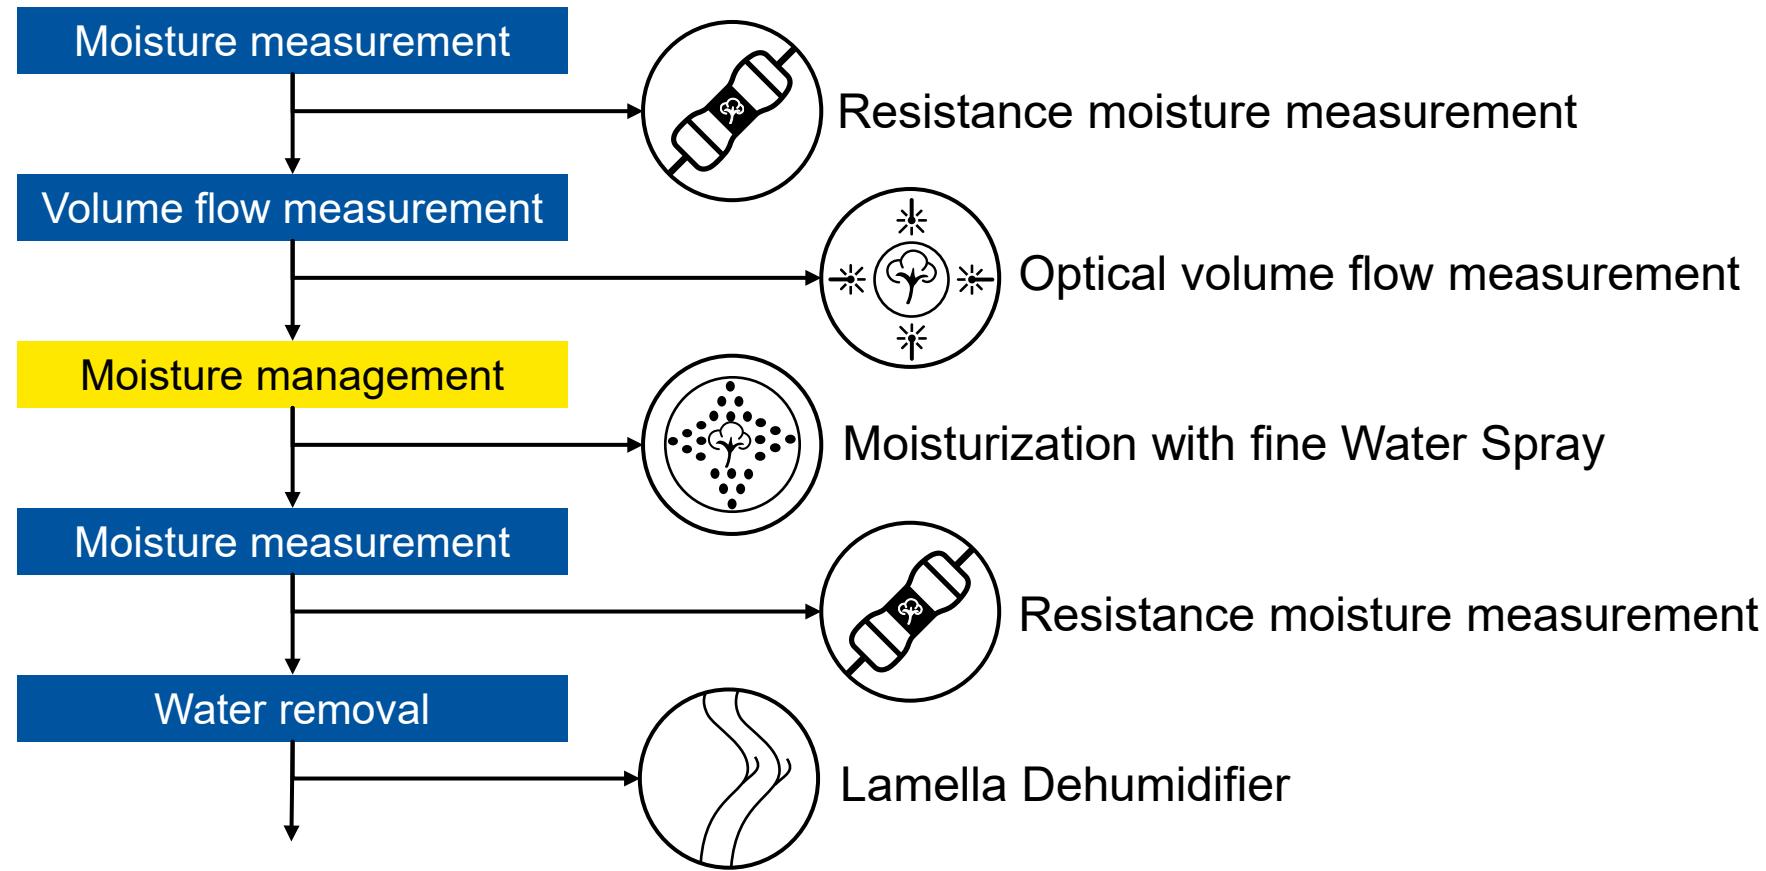

### Spray Water

- Good process integration (time wise)
- Good MC-increase
- Wettening possible
- MC-distribution good
- Low mechanical effectance
- Low installation and operation

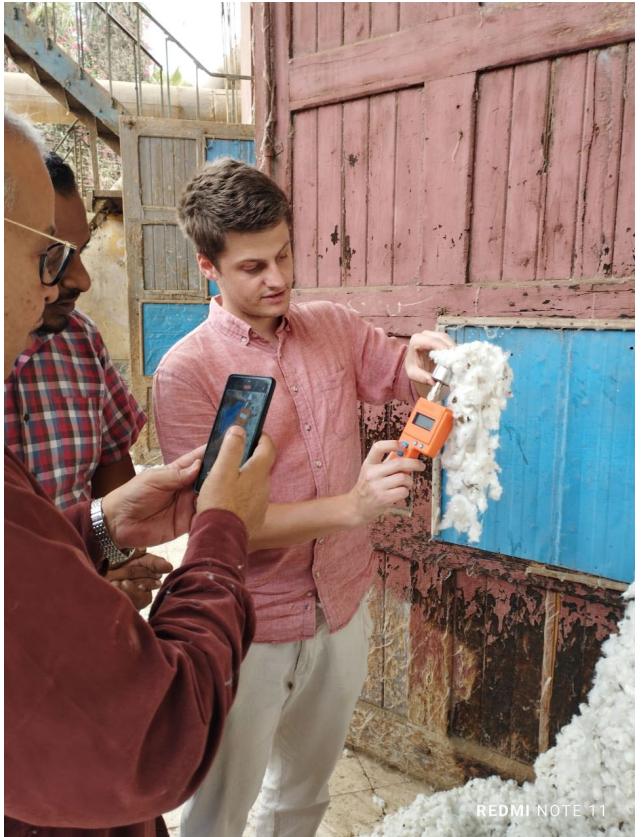

## Findings – Moisture Management

### Prototypen integrieren

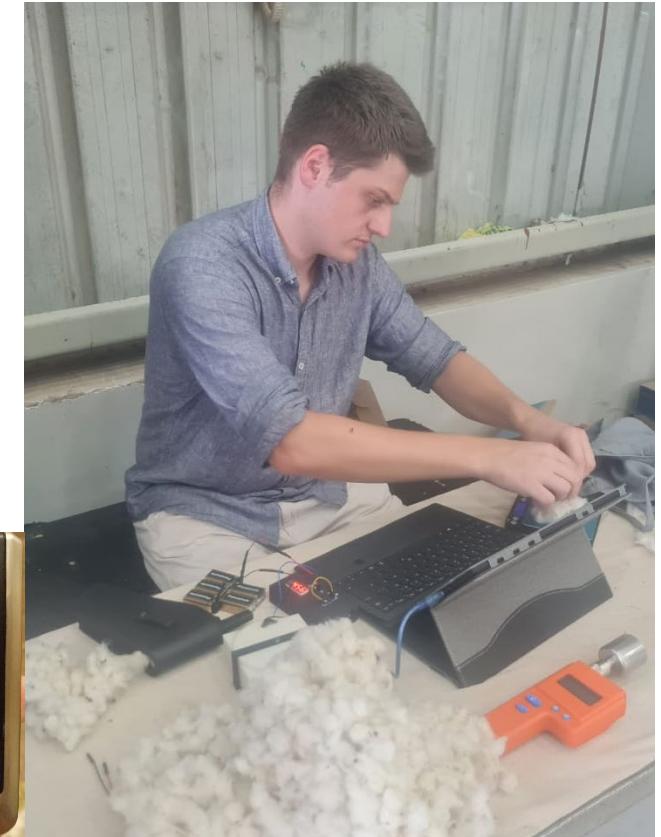

## Findings – Moisture measurement

### Current methods

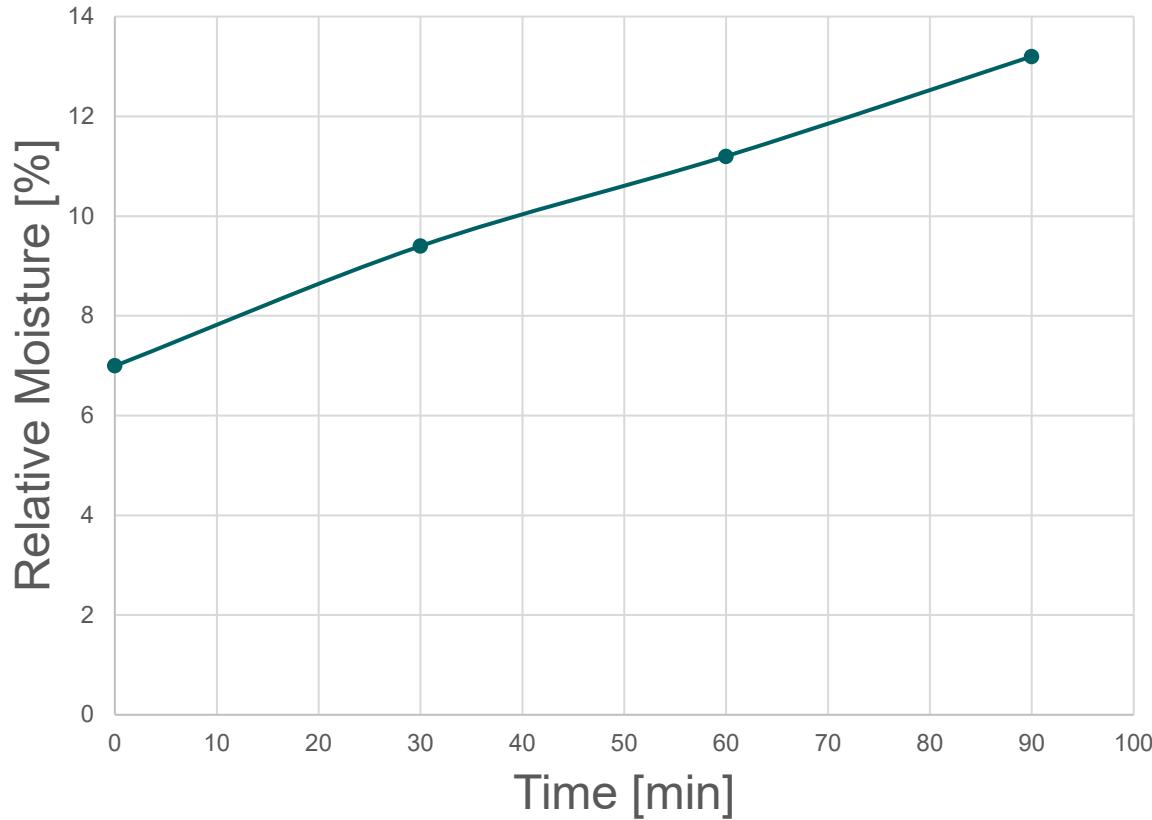

### New Approach

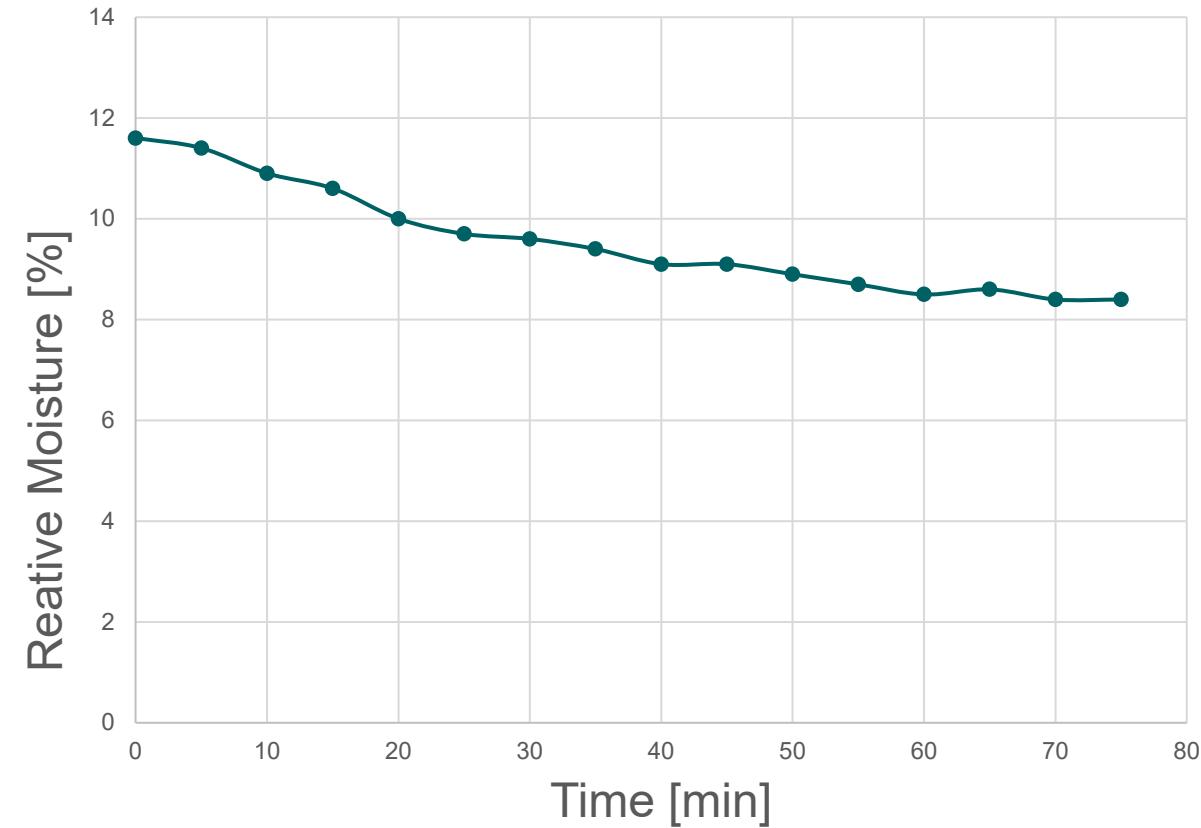

## Findings – Moisture Measurement: Laboratory measurements

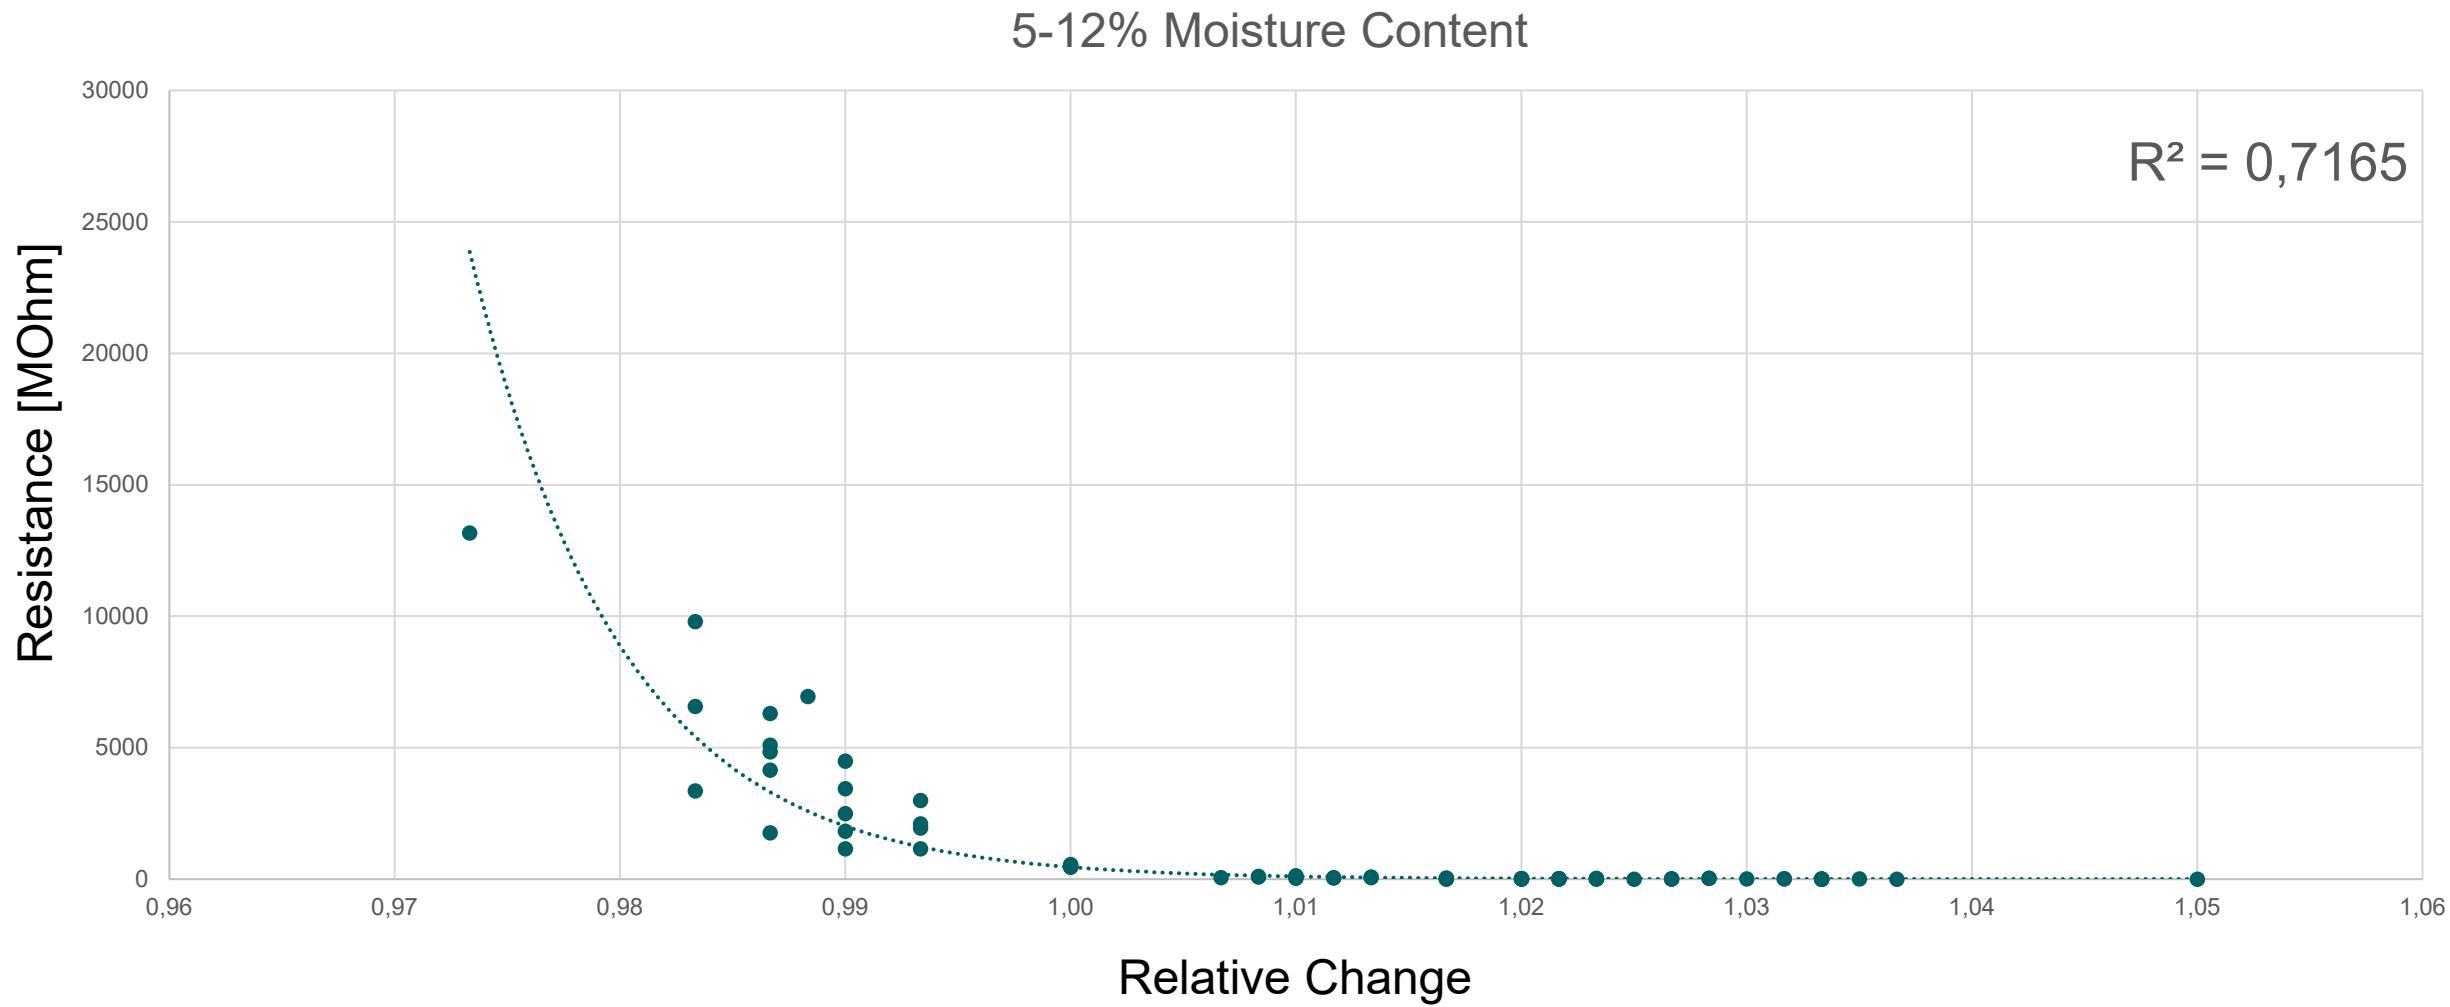

Moisturization 90 min 30° 95% rH

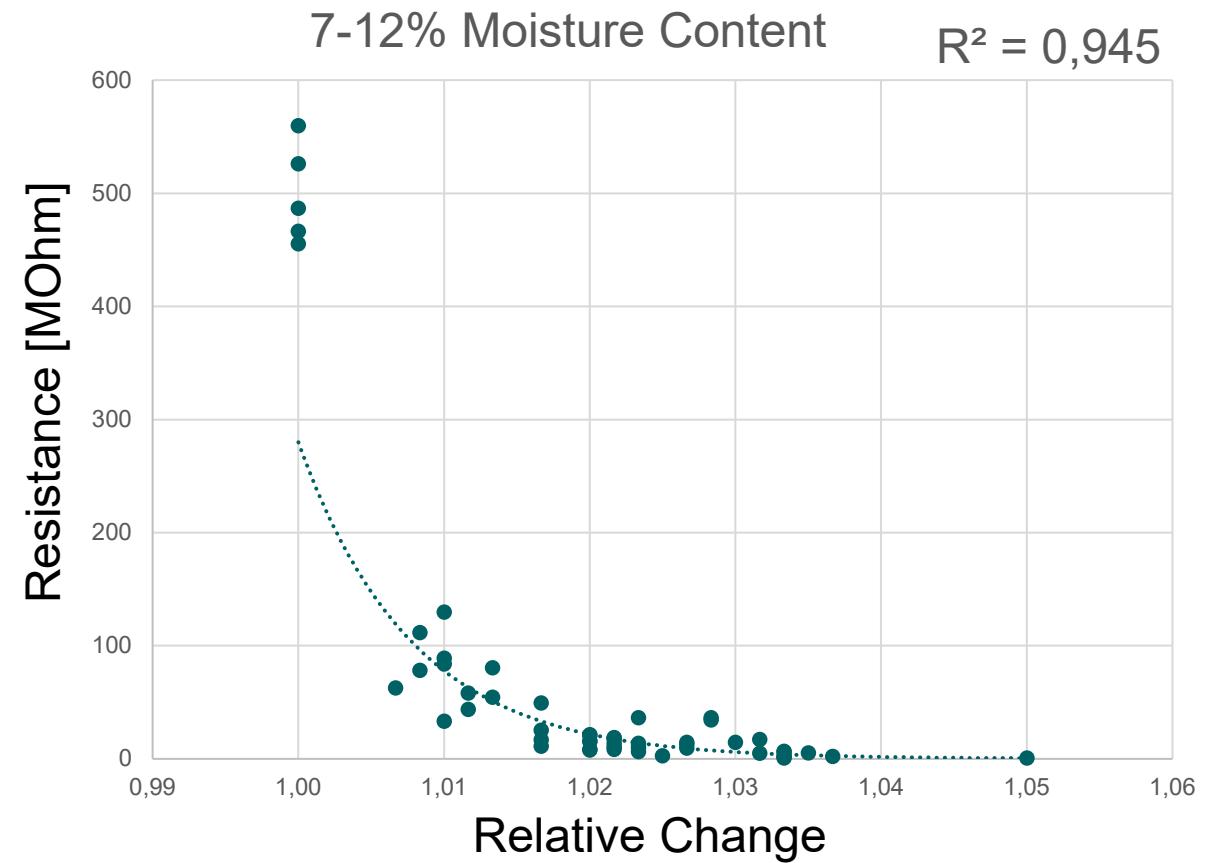

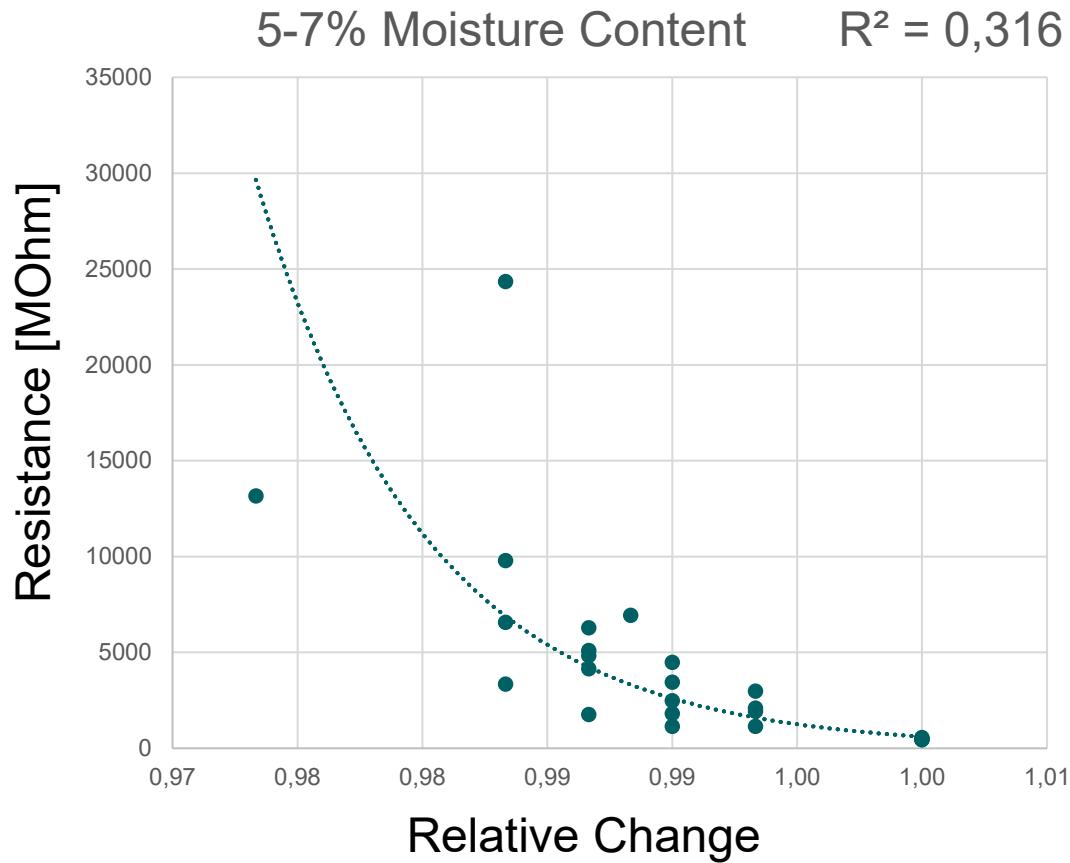

Drying at 20 °C 60 % rH

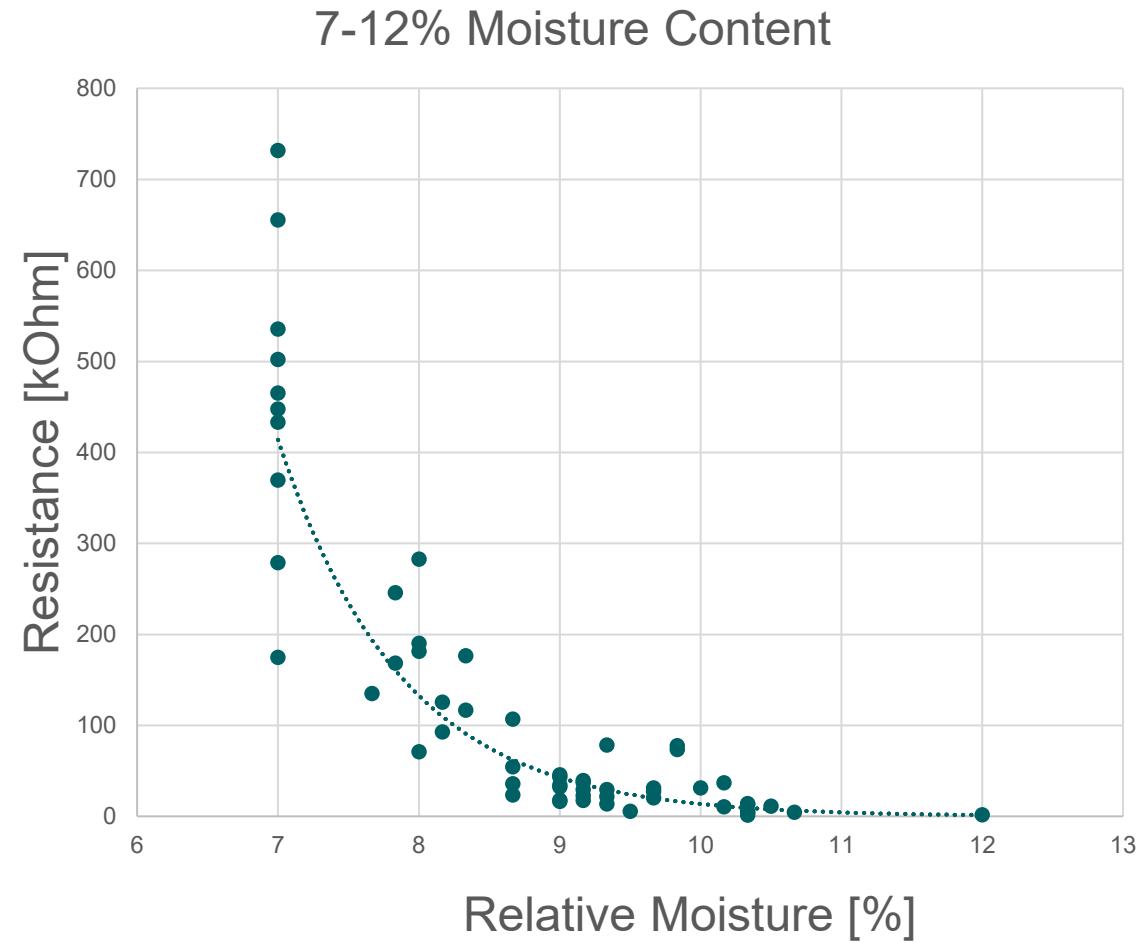

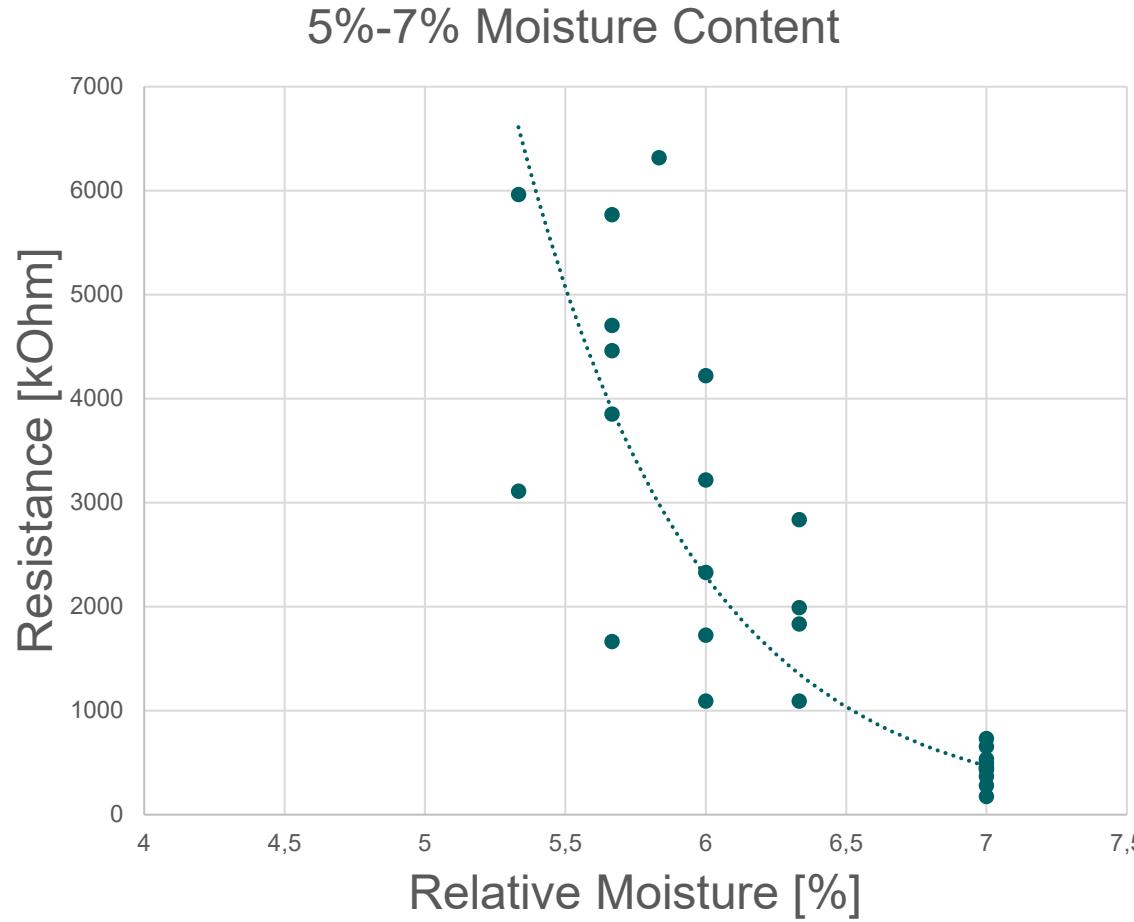

## Findings – Moisture Measurement: Laboratory measurements

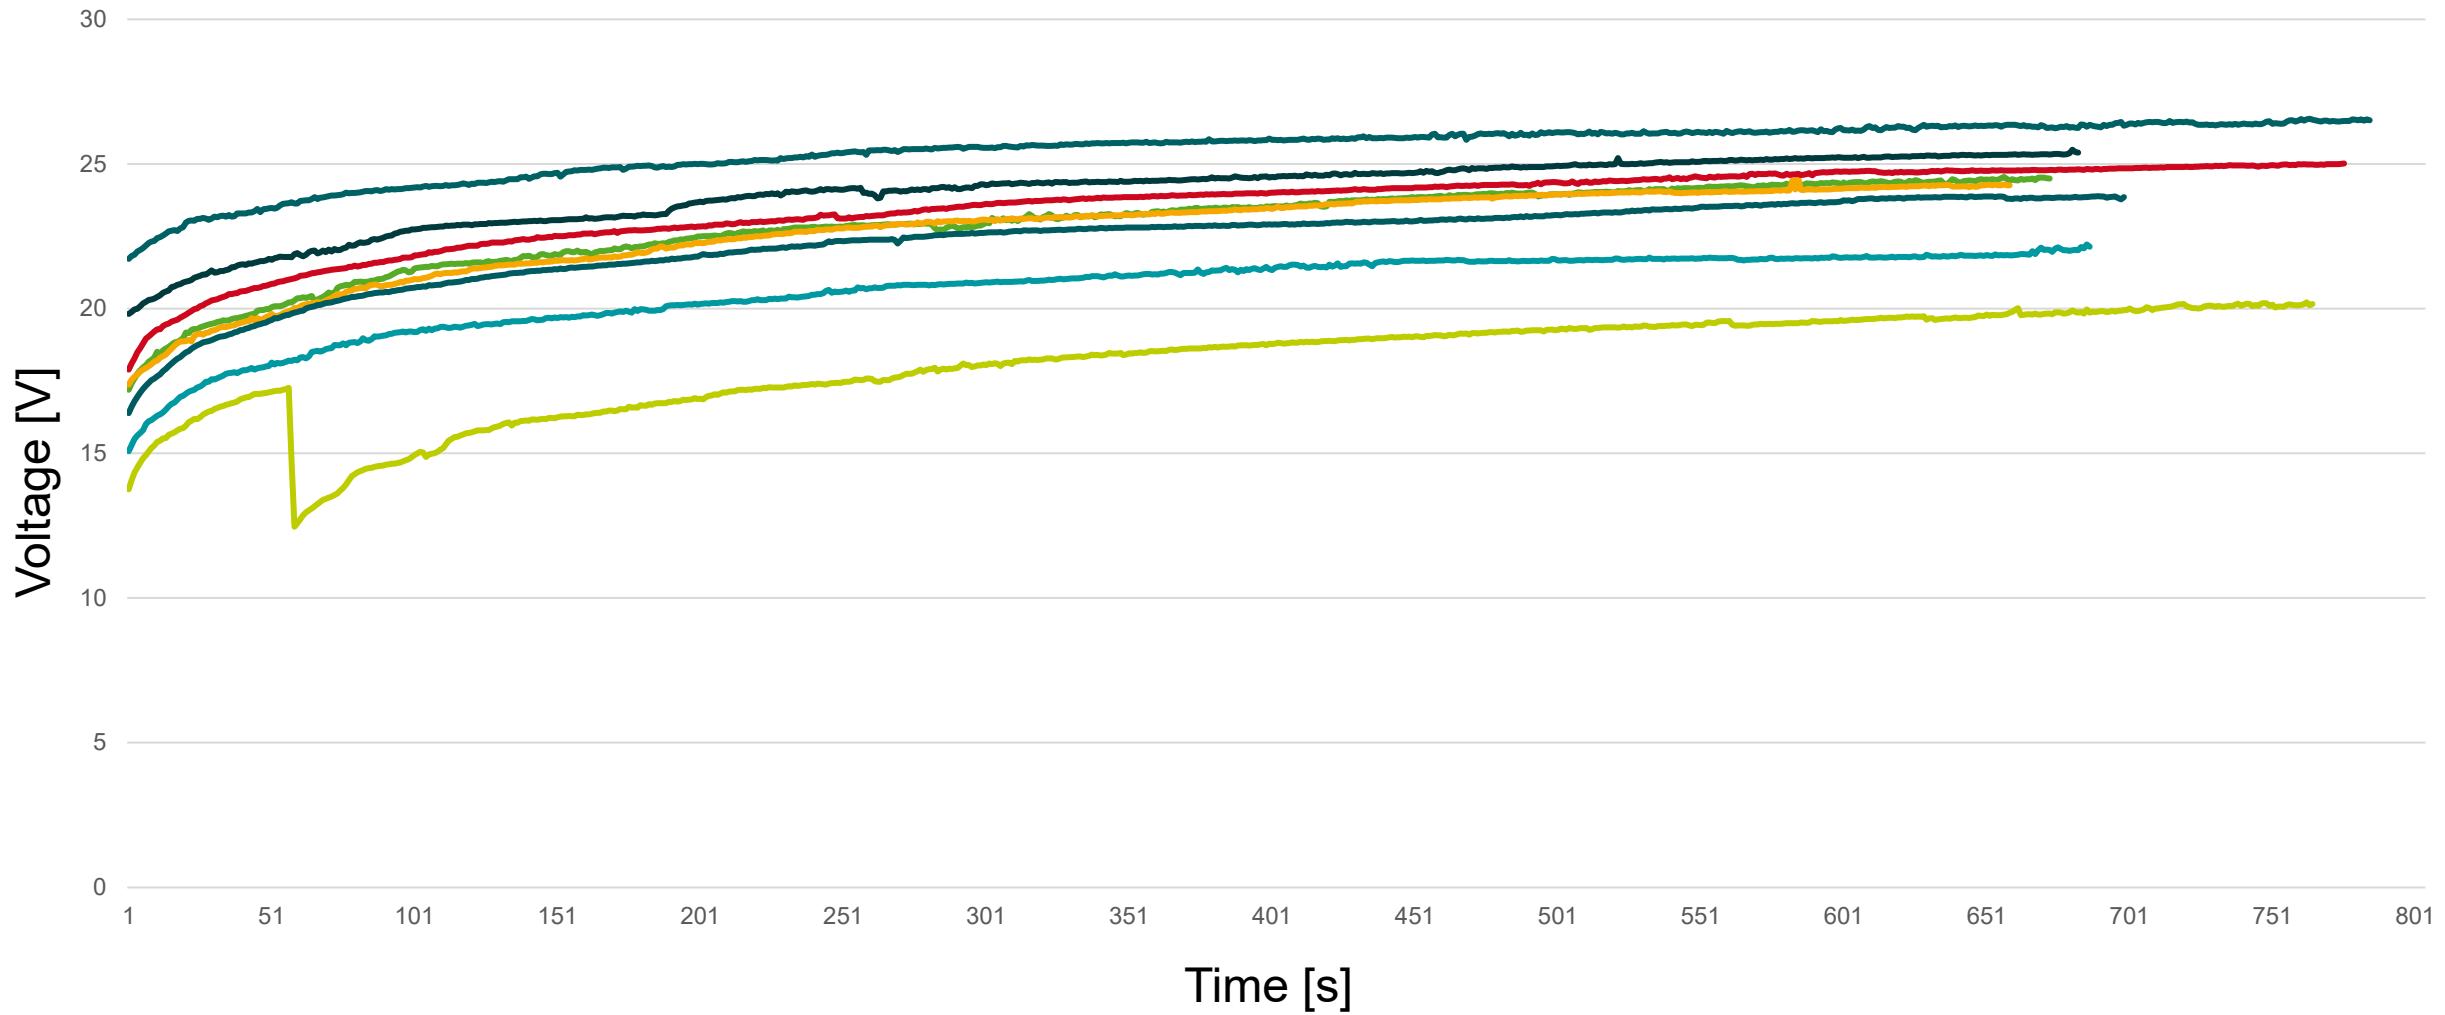

## Findings – Moisture Measurement: Laboratory measurements

## Findings – Moisture Measurement: Laboratory measurements

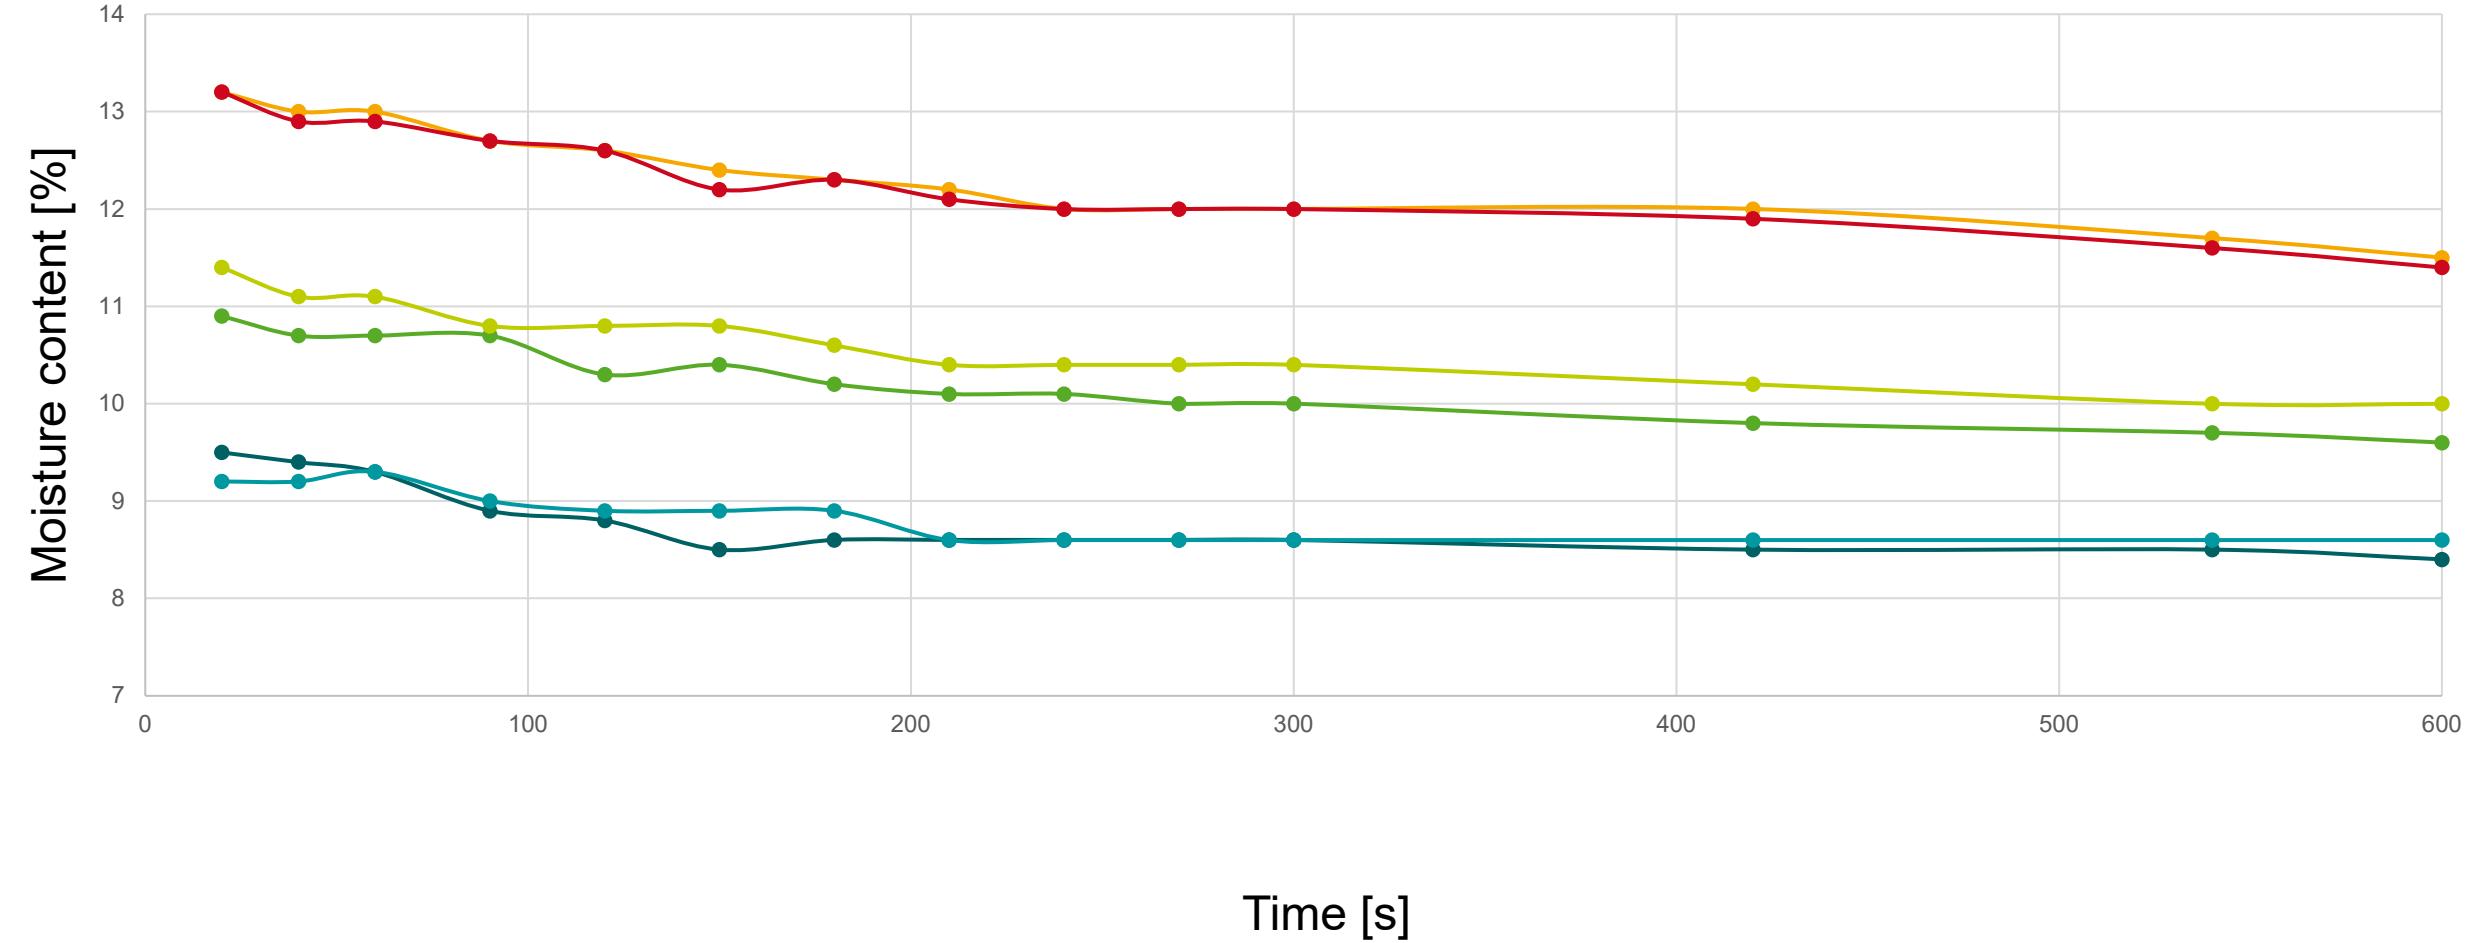

## Findings – Moisture Measurement: Laboratory measurements

## Findings – Moisture Measurement: Laboratory measurements

Drying from 30 °C 95 % rH to 20 °C 60 % rH

## Findings – Conclusion and Further recommendations

- Ginning is in the State of Industry 2.0
  - Simple and cheap solutions for current obstacles make the systems more likely to be used
  - Easy and trustworthy operation of Moisture Measurement and Moisture Management could increase cotton quality
- 
- Training on the field for harvesting and cotton operators
  - Governmental control of contamination regulations
